

Protoplanet express

a video game based on
hydrodynamical simulations
as an outreach tool

³Universidad Técnica Federico Santa María, Valparaíso, Chile

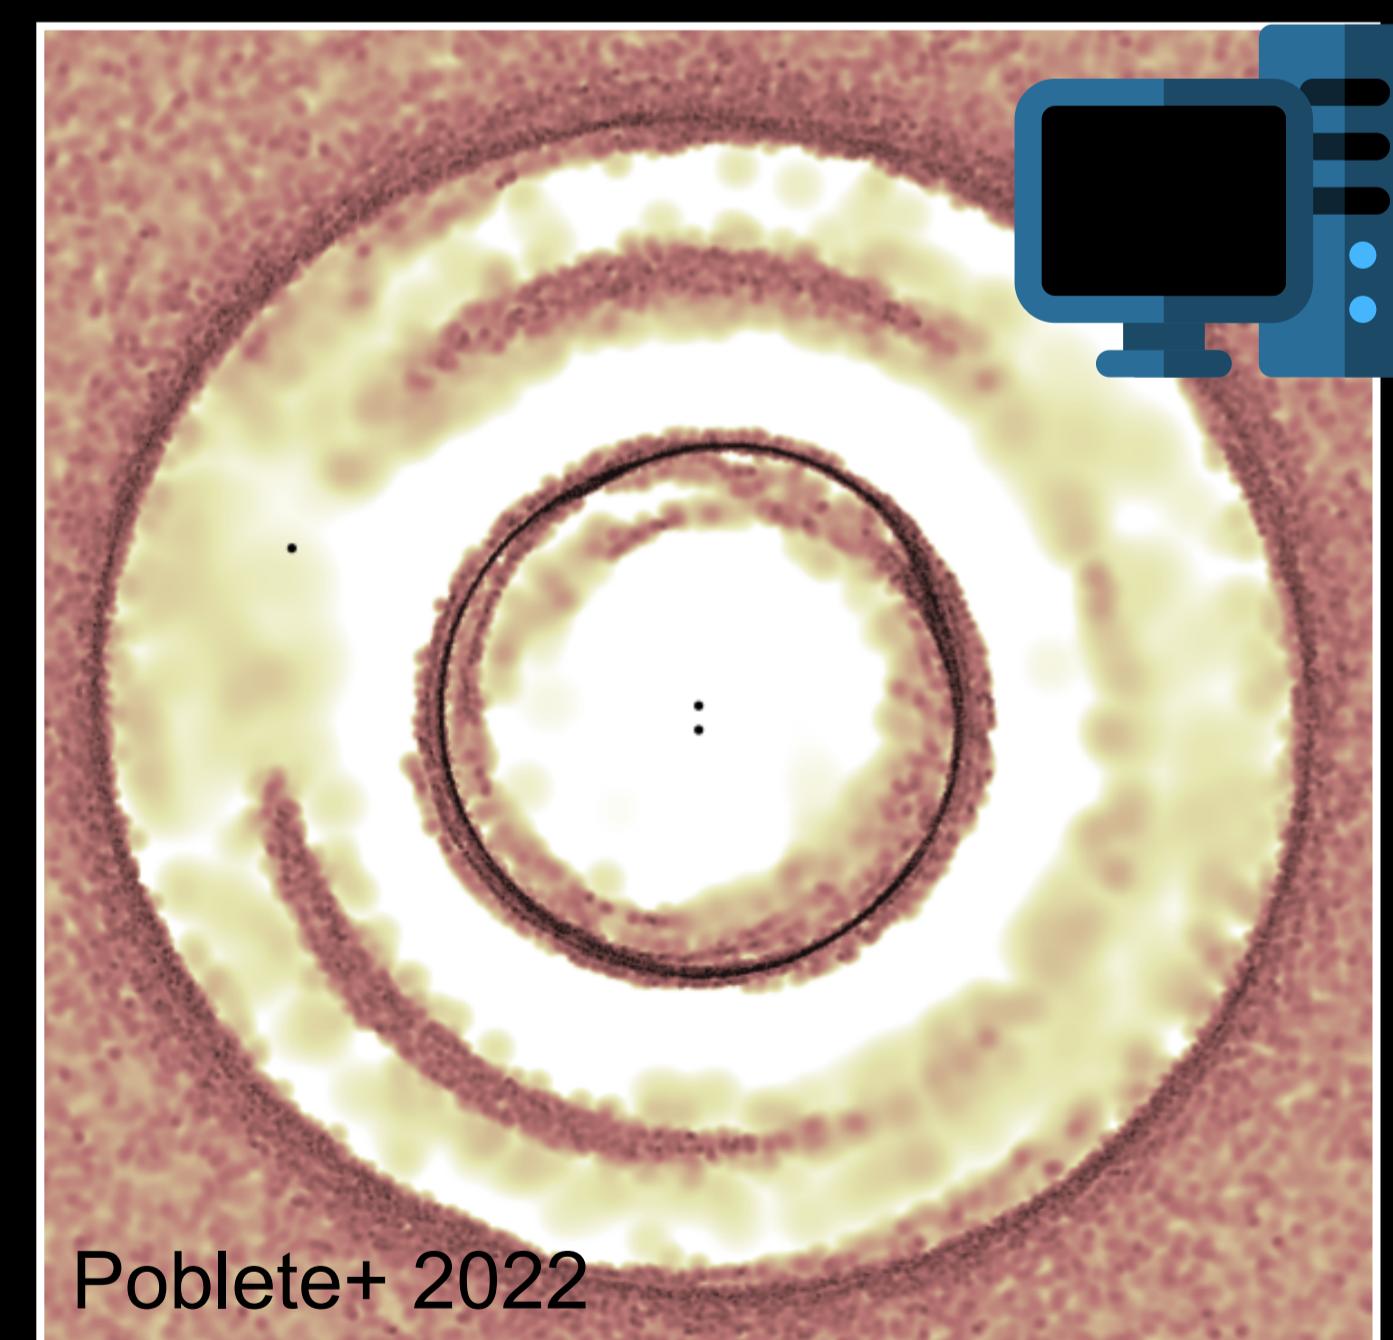

Many protoplanetary discs show features such as rings, cavities or spirals.

People love astronomical images, but they are typically not interactive.

Astrophysicists simulate discs, sometimes adding binaries or planets.

General public generally does not know about modelling efforts.

Simulation snapshot is a 3D model that can be exported to video game format.

Everybody can enjoy the game and learn some astrophysics!
